4195 EPOXY

DIRECT-TO-CONCRETE EPOXY PRIMER

4195 Direct-to-Concrete Epoxy Primer is a low-VOC, 95% solids pigmented epoxy designed to eliminate moisture vapor emissions (MVE) and provide a good base to broadcast acrylic flakes. Due to our proprietary wicking technology, the 4195 Epoxy develops an incredible bond strength to concrete, even under cool and damp conditions.

It eliminates the need for a separate primer, allowing the installer to broadcast media directly into the first coat. 4195 Epoxy is typically used as the primer/body coat for the Roll on Rock® System. It may also be used as a vapor reduction and odor barrier beneath carpet, VCT, and ceramic tile. The 4195 Epoxy may also be used as a standalone sealer over concrete.

FEATURES & ADVANTAGES:

- Bonds to damp surfaces
- Cools under cool wet conditions
- 95% solids
- 30 g/l VOC
- Low Odor
- Can be accelerated for low temperatures or allowing for 1 day installs
